

Shubham Bhardwaj

OBJECTIVE

MERN Stack Developer specializing in MongoDB, Express.js, React, and Node.js. I help clients build fast, scalable, and high-quality web applications. Seeking opportunities to deliver impactful full-stack solutions while continuously sharpening my skills and adapting to new technologies.

EXPERTISE

- Programming Language: Javascript
- Framework: React.js, Next.js, Node.js, Express.js
- Database Management: MongoDB, SQL
- Version Control: Git
- Web Development: HTML, CSS

PROJECTS

Fitness Application

Technologies: Next.js, Typescript, Prisma, PostgreSQL

- Users can find trainers whom they can connect via video calling
- Mediapose and Movenet implemented for AI to record poses in realtime
- NFT minting implemented for trainers

Social Media Application

Technologies: MERN (Express.js, Node.js, MongoDB, React.js), Socket.io, Agora

- A voice messaging application.
- Users can find others through their list of phone contacts who are signed up on the app. Phone contact who are signed up can be invited.
- Application primarily focuses on communicating through voice notes. Ability to send text messages is still there though.
- Ability to audio call one-to-one and group.

- Ability to send voice memos wherein user can record and send it alone, or he can invite other users in that group to collectively record a voice memo and send.
- Realtime messaging has been done with sockets and Real time calling has been done with Agora.

Rental Platform

Technologies: MERN (Next.js, Node.js, MySQL), Stripe

- User register as tenant and listed their property for rental purpose.
- User chat with tenant and book deal at adjusted price.
- Stripe and Paypal are implemented for payment and refund.

SaaS Application

Technologies: React.js, Node.js, MongoDB, MySQL

- It is a SaaS platform where distributors register, got approval from admin.
- BNPL service is implemented, score is generated based on documents provided and credit limit is determined.
- NESL and NSDL are implemented for digitally e-signing the application.
- Various micro services are implemented for Identity verification, business verification etc.
- Admin portal implemented for statically data and management of applications.

On-Demand Service Platform

Technologies: MERN (MongoDB, Express.js, React.js, Node.js), Nginx, Firebase

- Users can book me Guard me+ agents for security in your Events, Weeding, Parties, Clubbing, etc.
- Agents will come and deliver the services at your doorstep as per your request and schedule User just need to select the services and their sub-services and schedule at it your convenience. Users are also able to request extra hour of services to the agent.
- The agent will arrive at your location and start services after the confirmation from the User's side.
- Agents can accept or reject security services requests in Events, Weddings, Party, Clubbing, etc.
- Agents will be onboard by the owner of the platform after manual inquiry. These agents can get their security service requests with just a tap of a mobile app. Our agents will come and deliver the

security services at the customer's doorstep as per your request and schedule.
